

You are interested in phylogenomics?

You want to learn how to do a phylogenomics project, from the wet lab to data analysis, including the theory behind?

Then this is your workshop!

# Target enrichment for plant/animal systematics

## - methodological workshop -

### MB120C117

23<sup>rd</sup> May to 1<sup>st</sup> June 2022

by Roswitha Schmickl, Tomáš Fér, and Vojtěch Zeisek

Department of Botany, Charles University, Prague

#### You are going to learn:

- Genomic library preparation and bait hybridization (wet lab and theory)
- Choice of the optimal probe set for target enrichment (literature evaluation)
- Gene trees, species trees, and networks (theory and literature evaluation)
- From raw reads to the species tree (computer practical)
