Molecular Metal Clusters for Molecular Electronics: Redox Properties of the Building Blocks

Kterou přednese

Fabrizi Fabrizii de Biani

Universita degli Studi di Siena
Italy

dne 19.10.2015 v 15:00 hod.
v posluchárně CH2, v budově chemických kateder PřF UK
Hlavova 8, Praha 2

Starting from a discussion about the structural features and the redox behavior of metallic clusters, a panning shot of the analogies between these latter and the standard electronic components is proposed, together with some considerations about the potential current limits of the research in this field.
