

# POSTDOC wanted!

We are looking for a motivated postdoctoral research fellow. Our **Laboratory of Structural Proteins of Eukaryotic Chromosomes** is focusing on the Structural Maintenance of Chromosome (SMC) complexes (<http://www.ncbr.muni.cz/SPEC/>). We use a combination of approaches, such as genetics, genomics, biochemistry and molecular biology to understand how the SMC complexes accumulate along the genomes, how they interact with the other chromatin-associated complexes and how they modulate chromatin structure during cell cycle and under stress conditions.

Are you holding Ph.D. Degree in biochemistry, molecular biology or related field? Do you want to learn more state-of-the-art molecular biology and biochemical techniques?

You should have an experience in cultivating tissue cultures or yeasts, genetic or genomic analysis, an experience in analysis of RNA, DNA and protein complexes (more details: <https://www.muni.cz/en/about-us/careers/vacancies/55552>).

If you are interested, please contact the group leader **Assoc. Prof. Jan Palecek**, email [jpalecek@sci.muni.cz](mailto:jpalecek@sci.muni.cz), phone +420 549496128.
