

Proč použít citační
manažer

Problém:

Řešení:

MENDELEY

wants to help researchers
organize, share, and discover
research papers.

It's time to **change** the way we do **research**

Mendeley is a cross-platform research management tool that helps researchers manage and annotate their scientific paper collections.

- Co je Mendeley?
- Tvorba knihovny
- Správa dokumentů a citací
- Vkládání citací a tvorba bibliografie
- Sdílení a vytváření skupin / týmů

Co je Mendeley?

Mendeley je Londýnská společnost čítající 30+ vědců, absolventů a vývojářů z...

...podpořených
zakladateli a
představiteli:

last.fm
the social music revolution

S podporou:

Technology Strategy Board
Driving Innovation

Mendeley je software pro správu, sdílení, čtení, anotování a citování článků... - ZDARMA (Win, Mac & Linux)

...a vědecká síť, která vám umožní přistupovat ke své knihovně online, najít podobné články, hledat trendy a statistiky čtenosti a spojit se s vědci, kteří se zabývají podobným problémem, aniž ještě publikovali.

The screenshot shows the Mendeley Desktop application. The 'File' menu is open, showing options like 'Add Files...', 'Add Folder...', 'Watch Folder...', 'Add Entry Manually...', 'Export...', 'Delete Documents', 'Remove from Collection', 'Rename Document Files...', 'Synchronize Library', and 'Quit'. A list of documents is visible in the background, with columns for Author, Title, Year, Published in, and Added. A detailed view of a journal article is shown on the right, including the title 'Articles Mesenchymal stem cells for treatment of steroid-resistant, severe, acute graft-versus-host disease: a phase II study', authors 'K. Blanc, F. Frasson, L. Ball et al.', journal 'The Lancet', year '2008', volume '371', issue, and pages '1579-1586'. The abstract and tags are also visible.

Dokumenty můžete přidat mnoha způsoby:

- Přidáním jednotlivých souborů nebo složek
- Vytvořením “Watch-folder” pro automatický import
- Přetažením do okna Mendeley Desktop

... a Mendeley zkusí extrahovat metadata automaticky

Můžete také:

- Přít existující EndNote/BibTeX/RIS databázi
- Přidat z Mendeley Research Catalog
- Synchronizovat s jinými službami

1. Install the Web Importer:

www.mendeley.com/import

IMPORT TO MENDELEY

To install the Web Importer, you can either drag the icon to your browser's toolbar, or you can right-click this button and choose to add this link to your bookmarks.

For the Web Importer to work, your browser's pop-up blocker needs to be disabled. Click here to test your pop-up blocker: **Pop-up blocker**

Nainstalujete pouhým přetažením zástupce na lištu prohlížeče, nebo do oblíbených

2. Locate a document:

You can now begin to import documents from a wide variety of sites, such as those listed below. In addition to these sites, we also support **C.O.I.N.S** for the easy import of documents into Mendeley.

Key Words. Marrow stromal stem cells · Microvasculature · Pericytes · Transplantation · Skeleton · Stem cells · Plasticity · Gene therapy · Somatic cell therapy

ABSTRACT

Bone marrow stromal cells are progenitors of skeletal tissue components such as bone, cartilage, the hematopoiesis-supporting stroma, and adipocytes. In addition, they may be experimentally induced to undergo unorthodox differentiation, possibly forming neural and myogenic cells. As such, they represent an important paradigm of

post-natal nonhematopoietic stem cells, and an easy source for potential therapeutic use. Along with an overview of the basics of their biology, we discuss here their potential nature as components of the vascular wall, and the prospects for their use in local and systemic transplantation and gene therapy. *Stem Cells* 2001;19:180-192

My Library Treatment of severe a...

Adult bone-marrow-derived mesenchymal stem cells are immunosuppressive and prolong the rejection of mismatched skin grafts in animals. We transplanted haploidentical mesenchymal stem cells in a patient with severe treatment-resistant grade IV acute graft-versus-host disease of the gut and liver. Clinical response was striking. The patient is now well after 1 year. We postulate that mesenchymal stem cells have a potent immunosuppressive effect in vivo.

Lancet 2004; **363**: 1439–41
See Commentary page 1411

Severe acute graft-versus-host disease (GVHD) after allogeneic stem-cell transplantation is associated with high mortality. Bone marrow contains pluripotent mesenchymal stem cells that form bone, cartilage, adipose tissue, and muscle. These stem cells are not immunogenic and escape recognition by alloreactive T cells and natural killer cells. **Mesenchymal stem cells given intravenously have been well tolerated.** Furthermore, they are immunosuppressive and inhibit the proliferation of alloreactive T cells. Preliminary reports of

You ○
10/16/2010 3:26:12 PM
See Gregory et al. 2004

A 9-year-old boy with acute lymphoblastic leukaemia in third remission received a transplant of blood stem cells from an HLA-A, HLA-B, HLA-DRβ1 identical, unrelated, female donor after conditioning with cyclophosphamide (120 mg/kg) and fractionated total body irradiation (3 Gy for 4 days). Immunosuppression included thymoglobulin (6 mg/kg) during the conditioning, followed by ciclosporin combined with four doses of methotrexate. On day 11 after allogeneic stem-cell transplantation, the patient developed a maculopapular rash of the thorax and back that progressed despite treatment with prednisolone (2 mg/kg daily). By day 22, the patient developed diarrhoea (>1000 mL per day) and abdominal pain requiring morphine. He stopped eating on day 24. Bilirubin and alanine aminotransferase concentrations rose (figure 1). Psoralen and ultraviolet-A light (PUVA) treatment (two to three times per week) for 3 weeks was followed by extracorporeal PUVA (one to four times per week) for 6 weeks. Infliximab (10 mg/kg) and daclizumab (1 mg/kg) for 4 weeks were ineffective

We chose the mother as donor, because she was readily available and because MHC-compatibility is not necessary for mesenchymal stem-cell immunosuppression.³ After ethics-committee approval and informed consent, mesenchymal stem cells were isolated as previously described.³ Briefly, we isolated mononuclear cells from a bone marrow aspirate by Percoll gradient centrifugation (Sigma, St Louis, MO, USA). The cells were plated at a density of 3×10^5 cells per 175 cm² in polystyrene flasks in low glucose Dulbecco's modified Eagle's medium (Life Technologies, Gaithersburg, MD, USA) supplemented with 10% fetal

Abstract

RNA-Seq is a recently developed approach to transcriptome profiling that uses deep-sequencing technologies. Studies using this method have already altered our view of the extent and complexity of eukaryotic transcriptomes. RNA-Seq also provides a far more precise measurement of levels of transcripts and their isoforms than other methods. This article describes the RNA-Seq approach, the challenges associated with its application, and the advances made so far in characterizing several eukaryote transcriptomes.

It will be very good if you could publish your desktop under GPL or compatible license. That will boost its development, features and make it localized and modified according to the needs of much wider population. Indeed, this will make much more audiences for you. vekl

1,405 votes **Manually edit citation styles in Mendeley Desktop**

There should be a way to manually edit the citation styles in Mendeley Desktop, preferably in a WYSIWYG editor.
