

Our client is a privately held company based in Prague, providing services for the oil and gas industry focused on passive seismic. Its staff is formed by dedicated experts with a diverse academic and professional background. The company has a highly specialized know-how in the areas of forward and inverse seismic modelling.

For our client we are currently looking for suitable candidates to take positions of:

## **ANALYST/GEOPHYSICIST- JUNIOR**

He/ she will work on:

- the assigned tasks and projects (for individual clients and/or for the internal use) – including day-to-day communication with clients and/or internal team,
- data processing,
- regular reporting and presentations, incl. in-person visits.
- scripting and programming,
- research,
- publications, and private and/or public presentations of the results.

**Junior analyst** is expected to be able to carry out an independent work with the help of senior colleagues, the work includes simple programming, scripting, and reporting. He/she keeps up to date with the current technology and public information relevant to his/her assigned project.

Requirements:

- M.Sc. degree in Geophysics or related fields
- Fluent spoken and written English
- Analytical skills
- Basic knowledge of Programming skills (Matlab, C or C++)
- Ability to work independently on assigned tasks as well as a team member
- Drive to learn and educate himself/ herself in the industry
- Complies with the ISO standards and the company internal rules

Junior Analyst reports to the assigned project manager.
